MIRACLE COIN (MC)

A COMMUNITY-DRIVEN, DEFLATIONARY BURN-TO-EARN TOKEN
Table of Contents

Introduction

Common problems in token projects:

- Centralised control and opaque decision-making.

- Unchecked inflation and sudden unlocks causing dumps.

- Off-chain accounting that cannot be independently verified.

Miracle Coin addresses these with:

- Deflationary mechanics (protocol burns + vesting locks).

- On-chain transparency (contracts verified; state observable on BscScan).

- DAO governance (community proposals, voting and timelock execution).

- Liquidity discipline (DEX liquidity add & lock policy).

2025

Abstract

Miracle Coin (MC) is a decentralised, deflationary digital asset on Binance Smart Chain (BSC). Its Burn-to-Earn design aligns long-term scarcity with community participation, while DAO governance ensures that parameters and upgrades are decided collectively. All core mechanics—burns, vesting, liquidity and governance—are on-chain and verifiable.

This paper focuses only on the token and protocol. Any third-party distribution models or promotional systems are outside the scope of this document.

Vision & Mission

Mission

To become a community-owned, transparent and sustainable digital asset whose value proposition derives from on-chain scarcity, utility and governance, not from centralised promises.

Vision

- Reward participation without enabling manipulation.

- Keep all flows on-chain, independently auditable.

- Empower DAO governance with timelocked execution.

- Build a responsible market structure: scarcity + liquidity + gradual unlocks.

Protocol Overview

1. Mint & Supply Cap

- Fixed maximum supply: 21,000,000 MC (18 decimals).

2. Burn-to-Earn

- Protocol flows trigger allocations + burns, permanently reducing supply.

3. Vesting Locks

- Allocated MC is locked in a vesting contract, released linearly at 0.5% per day (~200 days).
- Applies to team, advisors, and select treasury allocations.

4. Liquidity

- A portion of inflows is added to PancakeSwap liquidity.
- LP tokens are locked via trusted third-party service.

5. DAO Governance

- Parameters (burn rates, liquidity, upgrades) are set by DAO vote under timelock.
Tokenomics

TOKEN NAME	:	**MIRACLE COIN**
SYMBOL	:	**MC**
SUPPLY	:	**21,000,000**
NETWORK	:	**BSC**
DECIMAL	:	**18**

2.5% **9%** **0.5%**

88%

- Community Staking Pool (1,84,80,000 MC) → Distributed gradually through on-chain vesting.

- PancakeSwap Liquidity (5,25,000 MC → Locked liquidity ensures smooth trading.

- Bonus & Airdrops (18,90,000 MC) → Incentives for early adopters and community.

- Ecosystem Growth & Promotion → Marketing, partnerships, growth, Creator Reserve (1,05,000 MC) → Long-term sustainability.

  * Vesting Rule: Unlock begins after 17 months, released at 0.5% per day (~200 days).

Liquidity & Staking Unlock Mechanism

- The Miracle Coin ecosystem is carefully designed to maintain sustainable liquidity, long-term price stability, and transparent on-chain operations.
- Our token allocation model reflects a fair and growth-oriented structure that empowers the global community while protecting investors' confidence.

Token Allocation

Category Allocation Purpose

- Community Pool 88% Used for package distribution, staking, and community rewards.
- Reward Pool 9% Dedicated to rank rewards, promotions, and global incentive programs.
- PancakeSwap Liquidity 2.5% Provides strong market depth, stability, and smooth trading experience.
- Creator / Dev Reserve 0.5% Locked for 17 months with a gradual 0.5% daily unlock schedule to ensure transparency.

PancakeSwap Liquidity & Staking Policy

- To maintain a healthy trading environment and prevent volatility, no buy-side fee will apply to PancakeSwap transactions during the first two years after launch.
- However, all tokens purchased from PancakeSwap will be automatically staked in the Miracle Vault, rather than being instantly tradable.
- These staked tokens will unlock progressively at a rate of 0.5% per day, ensuring a controlled and stable token release while encouraging long-term holding behavior.
- After 24 months, this staking restriction will automatically expire, and tokens purchased from PancakeSwap will become fully liquid and freely tradable.

Key Benefits

- ✅ Deep Liquidity: Ensures consistent price performance and reduced volatility.
- ✅ Controlled Circulation: Gradual 0.5% daily unlock prevents dumping.
- ✅ Fair Growth Model: Encourages genuine holders and long-term participants.
- ✅ Automatic Expiry: Staking restriction ends after 24 months – full free-market transition.

Principles

- No Sudden Dumps: All locked allocations are governed by linear vesting, ensuring coins cannot flood the market at once.

- Community-First: Majority of supply is in staking pool and DAO-controlled treasury.

- Founder Safety Check: Only 0.5% allocation reserved for creator, locked with delayed vesting to prove founder is not in control.

- On-Chain Transparency: All vesting schedules are coded in smart contracts, verifiable on BscScan.

- Majority goes to DAO-managed treasury → transparent & community-first.

- Liquidity pool ensures market stability.

- Only 0.5% allocated to team → proving this is not a founder-centric project.

This makes it crystal clear:

Marketing coins and Creator reserve (0.5%) → locked 17 months → then slow 0.5% daily release.

No bulk unlocks = no dump risk.

Distribution

Miracle Coin's distribution is designed for long-term sustainability and community-first growth.

- Decentralised Control: Majority goes to the treasury and incentives, managed through DAO for transparent decision-making.
- Sustainable Growth: Strategic reserves and partnerships ensure continuous expansion of the ecosystem.
- Market Stability: Dedicated liquidity pool helps maintain stability and healthy trading activity.
- Community Empowerment: Airdrops and rewards are reserved for active supporters and early believers.
- Commitment & Trust: Only 0.5% is allocated to team & advisors, with long-term vesting — proving this is not a founder-centric project.

This allocation ensures Miracle Coin remains a project of the people, by the people, for the people — powered by blockchain.

Market Mechanics:

Why Deflation Supports Value

Flow: Activity → MC Allocation → Burn → Supply ↓ → Scarcity ↑ →
Market Price Support.

- Burns = permanent supply reduction.
- Vesting = selling pressure control.
- Liquidity = depth & reduced slippage.
- Outcome = market-driven, not guaranteed.

Governance (DAO)

Model: Snapshot (off-chain) + On-chain Governor with Timelock.

Execution: Proposals queue in timelock → execute after delay.

Decisions Cover : burn %, liquidity, treasury grants, auditor selection.

Safeguards:

- Treasury controlled by multisig (Gnosis Safe).
- Verified contracts on BscScan.
- Timelock protection for privileged actions.

2025

Decentralisation & Creator-Independence

- After DAO handover, no single person or company

controls MC.

- Value comes from code + transparency + community,

not promises.

- Inspired by Bitcoin: sustainability depends on

community adoption.

Roadmap

(Indicative, DAO-Driven – No Fixed Dates)

Community Expansion
Burn-to-Earn campaigns, vesting dashboards, reward pools.

DAO portal launch, treasury handover, timelock activation, auditor selection.

Governance Transition

Ecosystem Growth
DeFi & dApp partnerships, grants for builders, strategic reserves.

Non-custodial wallet with DAO integration.

Miracle Wallet
